Cautionary Statements

This presentation contains forward-looking statements within the meaning of securities legislation in the United States and Canada, including statements regarding projected mine life, economics, costs, capital expenditures, production, processing rates, grade, recovery rates, and additional optimization work. Such forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause Coeur’s actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. Such factors include, among others, the risks and hazards inherent in the mining business (including risks inherent in developing large-scale mining projects, environmental hazards, industrial accidents, weather or geologically related conditions), changes in the market prices of gold and silver and a sustained lower price environment, the uncertainties inherent in Coeur’s production, exploratory and developmental activities, including risks relating to permitting and regulatory delays, ground conditions, grade variability, any future labor disputes or work stoppages, the uncertainties inherent in the estimation of gold and silver reserves and resources, changes that could result from Coeur’s future acquisition of new mining properties or businesses, reliance on third parties to operate certain mines where Coeur owns silver production and reserves and the absence of control over mining operations in which Coeur or its subsidiaries hold royalty or streaming interests and risks related to these mining operations including results of mining and exploration activities, environmental, economic and political risks of the jurisdiction in which the mining operations are located, the loss of access to any third-party smelter to which Coeur markets silver and gold, the effects of environmental and other governmental regulations, the risks inherent in the ownership or operation of or investment in mining properties or businesses in foreign countries, Coeur’s ability to raise additional financing necessary to conduct its business, make payments or refinance its debt, as well as other uncertainties and risk factors set out in filings made from time to time with the United States Securities and Exchange Commission, and the Canadian securities regulators, including, without limitation, Coeur’s most recent reports on Form 10-K and Form 10-Q. Actual results, developments and timetables could vary significantly from the estimates presented. Readers are cautioned not to put undue reliance on forward-looking statements. Coeur disclaims any intent or obligation to update publicly such forward-looking statements, whether as a result of new information, future events or otherwise. Additionally, Coeur undertakes no obligation to comment on analyses, expectations or statements made by third parties in respect of Coeur, its financial or operating results or its securities.

W. David Tyler, Coeur’s Vice President, Technical Services and a qualified person under Canadian National Instrument 43-101, supervised the preparation of the scientific and technical information concerning Coeur’s mineral projects in this presentation. Mineral resources are in addition to mineral reserves and do not have demonstrated economic viability. Inferred mineral resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be considered for estimation of mineral reserves, and there is no certainty that the inferred mineral resources will be realized. For a description of the key assumptions, parameters and methods used to estimate mineral reserves and resources, as well as data verification procedures and a general discussion of the extent to which the estimates may be affected by any known environmental, permitting, legal, title, taxation, socio-political, marketing or other relevant factors, please refer to the current NI 43-101-compliant Technical Report for La Preciosa on file at www.sedar.com and the new Technical Report for the La Preciosa feasibility study to be filed within 45 days on www.sedar.com.

Cautionary Note to U.S. Investors - The United States Securities and Exchange Commission permits U.S. mining companies, in their filings with the SEC, to disclose only those mineral deposits that a company can economically and legally extract or produce. We may use certain terms in public disclosures, such as “measured,” “indicated,” “inferred” and “resources,” that are recognized by Canadian regulations, but that SEC guidelines generally prohibit U.S. registered companies from including in their filings with the SEC. U.S. investors are urged to consider closely the disclosure in our Form 10-K which may be secured from us, or from the SEC’s website at http://www.sec.gov.

Non-U.S. GAAP Measures - We supplement the reporting of our financial information determined under United States generally accepted accounting principles (U.S. GAAP) with certain non-U.S. GAAP financial measures, including cost applicable to sales per silver equivalent ounce and adjusted EBITDA. We believe that these adjusted measures provide meaningful information to assist management, investors and analysts in understanding our financial results and assessing our prospects for future performance. We believe these adjusted financial measures are important indicators of our recurring operations because they exclude items that may not be indicative of, or are unrelated to our core operating results, and provide a better baseline for analyzing trends in our underlying businesses. We believe costs applicable to sales per silver equivalent ounce and adjusted EBITDA are important measures in assessing the Company's overall financial performance.
Executive Summary

- Coeur acquired the La Preciosa silver-gold project in April 2013 through the acquisition of Orko Silver

- Preliminary Economic Assessment (PEA) completed in July 2013

- Feasibility study now complete; NI 43-101 Technical Report to be filed within 45 days
  - Once in operation, La Preciosa would be Company’s largest source of silver production and would lower the Company’s overall cost structure
  - 10% internal rate of return based on $22/oz silver price and $1,350/oz gold price
  - Lower silver prices (down 29% since acquisition announced) and higher Mexican taxes have diminished the project’s economics

- Coeur has concluded now is not the optimal time to proceed with mine construction
  - Feasibility study demonstrates a very attractive project at higher silver and gold prices
  - Deferring construction enables Coeur to maintain the project’s leverage to better macro conditions and provides time to pursue limited drilling and metallurgical work to further improve the expected project economics
Attractive Asset with Many Unique Attributes

- >125 square miles of contiguous mining claims
  - Almost three times the size of the Palmarejo District
  - Deposit located on 3% of land package

- Significant infrastructure in place
  - Access by paved highway from Durango
  - 8 km to rail lines
  - 8 km to national power grid
  - Water supply secured

Once in production, would be the world’s sixth largest primary silver mine

1. Based on 2013 production published by The Silver Institute.

NYSE: CDE
Feasibility Study Highlights

- 10% internal rate of return (“IRR”) based on silver and gold prices of $22 and $1,350 per ounce, respectively
- Declared initial proven and probable reserves increases Companywide silver and gold reserves by 50% and 10%, respectively
- 12% decrease in projected initial capital expenditures compared to the PEA to $307 million
- 10% decline in expected costs applicable to sales per silver equivalent ounce\(^1\) versus the PEA to $14.37
- 5% increase in overall silver grade compared to the PEA
- Substantially de-risked the project
- Feasibility work completed on time and under budget

---

1. Non-GAAP measure. Silver equivalence assumes 60:1 ratio.

Deferring Construction Supports Disciplined Approach to Financial Leverage

- Initial capital expenditures for La Preciosa are estimated to be $307 million over a two-year construction period.
- Funding construction would likely require Coeur to access the capital markets to avoid significantly eroding liquidity.
- Debt is currently Coeur’s preferred source for external funding for development projects:
  - Lower cost of capital
  - Avoids dilution of common equity
- Coeur is comfortable with current financial leverage levels.

Mineral reserves and resources effective July 29, 2014 using metal prices of $22 per silver ounce and $1,350 per gold ounce for reserves and $25 per silver ounce and $1,400 per gold ounce for resources. For details on the estimation of mineral resources and reserves for La Preciosa, please refer to the new Technical Report for the La Preciosa feasibility study to be filed within 45 days on www.sedar.com. Mineral resources are in addition to mineral reserves and do not have demonstrated economic viability. Inferred mineral resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be considered for estimation of mineral reserves, and there is no certainty that the inferred mineral resources will be realized.
La Preciosa Feasibility Study adds Significant Reserves per Share

1. Per share calculation based on number of shares outstanding on December 31 of the respective year.

Notes to the above mineral reserves and resources:

2. Metal prices used for mineral reserves were $25.00 per ounce of silver and $1,450 per ounce of gold, except Endeavor, at $2,300 per metric ton of lead, $2,300 per metric ton of zinc, and $34.00 per ounce of silver, and La Preciosa at $22.00 per ounce of silver and $1,350 per ounce of gold. Metal prices used for mineral resources were $29.00 per ounce of silver and $1,600 per ounce of gold, except for Endeavor, at $2,300 per metric ton of lead, $2,300 per metric ton of zinc and $34.00 per ounce of silver, and La Preciosa at $25.00 per ounce of silver and $1,400 per ounce of gold.
3. Palmarejo mineral resources (measured, indicated, and inferred) reported above represent the sum of Palmarejo, Guadalupe, and La Patria resources.
4. Kensington proven and probable reserves adjusted April 2014 to reduce the grade of internal dilution to zero.
5. Mineral resources are in addition to mineral reserves and do not have demonstrated economic viability. Inferred mineral resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be considered for estimation of mineral reserves, and there is no certainty that the inferred mineral resources will be realized.
6. Rounding of tons and ounces, as required by reporting guidelines, may result in apparent differences between tons, grade, and contained metal content.
